

We're partnering with Google and Coursera to offer free professional training to 500 Camden residents.

There are four programmes to choose from: IT Support, Data Analysis, Project Management and UX Design. You don't need any experience or a degree to take part in a course, just an interest in starting a new career.

You'll learn 100% online, in your own time. Each programme takes about six months with less than 10 hours' study time per week.

Through a mix of videos, reading, assessments and hands-on activities you will develop the skills you need for an entry level role and come away with a certificate that is recognised by industry experts and employers.

82% of Google certificate graduates say that they have found a job, had a pay rise or started their own business within six months of completion.

IT Support

IT support professionals use troubleshooting and problem solving to help computers and networks run smoothly, while providing great customer service. You'll learn about building computers, networking, cloud computing, Windows, Linux command line, systems administration, encryption algorithms and techniques and more.

Data Analytics

Data analysts prepare, process and analyse data to discover trends, make predictions and help inform business decisions. They create visualisations to share their findings and provide recommendations. Through this programme you will learn how to do this using common tools such as presentations, spreadsheets, SQL, Tableau and R.

Project Management

Project managers are responsible for planning, organising and running projects so they are delivered on time and on budget. This programme will teach you how to initiate, plan and run traditional and Agile projects, learning as you go how to manage a schedule, budget and team.

User Experience (UX) Design

UX designers make products and tools that are useful, accessible and enjoyable to use. You'll learn how to complete the process from beginning to end, empathising with users, creating prototypes and using feedback to develop your product. You will also learn how to use Sigma and Adobe XD, creating a portfolio of three projects to show employers.
